Whenever bed rails are used as part of any hospital or homecare bed system, the potential for bed rail entrapment exists. To reduce this risk, a patient must always be assessed regarding their risk of entrapment before any product is used. Routine patient monitoring is also required once a product is in use. To learn more about the risk of bed rail entrapment please visit the US FDA's website at <http://www.fda.gov> and reference the FDA guidance document on "Hospital Bed System Dimensional and Assessment Guidance to Reduce Entrapment."

Invacare beds, mattresses and rails, excluding therapeutic support surfaces and bariatric beds, when used as a system and sold new and unused after August 1, 2007, meet the voluntary FDA Guidelines for bed rail entrapment. Visit [www.invacare.com/bedsafety](http://www.invacare.com/bedsafety) for additional safety and entrapment information.

\*Subject to availability. If product is not in stock, 4 week lead time applies.
